

Piloting Climate Change Adaptation to Protect Human Health (in Fiji)

Description

In Fiji: The principal expected benefit for the **health** sector is having a functional **Health** Information System that is capable of generating Early Warnings for **climate** sensitive diseases and communicating these effectively to relevant stakeholders. The project will also: create awareness amongst communities; further strengthen interdisciplinary collaboration and communication within all levels the Ministry of **Health**; strengthen inter-sectoral collaboration at all levels with other key government agencies (such as the Fiji Meteorological Service and the National **Disaster Management** Office) and organizations such as the IFRC-RC. The project contributes to the revival of the Fiji **Climate Change** Country Team to ensure proper coordination of **climate change** activities in the country.

Project Status **Completed**

Start Date Wednesday, April 1, 2009

End Date Thursday, December 31, 2015

Project Type **Capacity Building**
Field Implementation

Project Scope **Regional**

Project Objectives Fiji Project Objective: To increase the adaptive capacity of the **health** sector to respond to **climate** sensitive risks.

Project Outputs Output 1: Early warning systems will be adjusted to include climate change induced health risks. Output 2: Capacity of health sector institutions to respond to climate-sensitive health risks will be improved. Output 3: Prevention measures piloted in emerging and epidemic risk area. Output 4: Cooperation among participating countries promotes innovation in adaptation to climate change including variability.
