## Ocean Acidification Monitoring In New Zealand

Kim Currie

NIWA

Dunedin, New Zealand

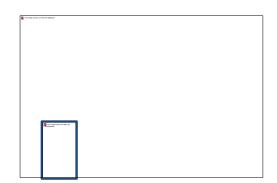

# The New Zealand Experience in Setting up Ocean Acidification Observations

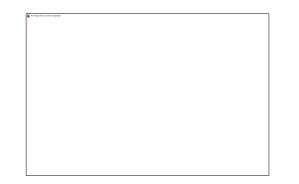

- Experience in carbon chemistry
  - have been mainly research focussed
  - collaborative, inter-disciplinary projects
- Time series for marine carbon research
  - role of ocean in carbon cycle
- Extending expertise and developing collaborations to develop OA coastal monitoring programme

## **Munida Time Series**

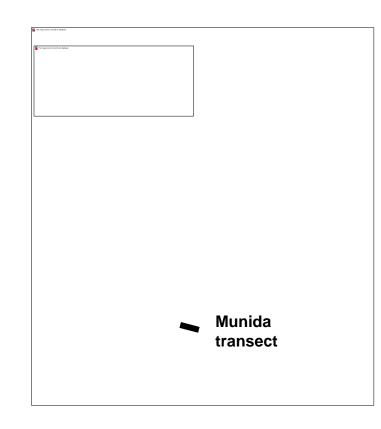

- A carbon chemistry time series was established in 1998, off the coast near Dunedin, New Zealand – Munida Time Series
- Part of research programme looking at uptake of atmospheric carbon dioxide by SW Pacific waters
- Now is longest running carbon time series in the Southern Hemisphere
- Collaboration between NIWA and the University of Otago
- $\bullet$  Carbon chemistry ightarrow ocean acidification parameters

## Munida Time Series

- surface transect, 65 km long
- neritic, modified subtropical water, subantarctic surface water (SASW)
- SASW cast (500m)
- bi-monthly since 1998

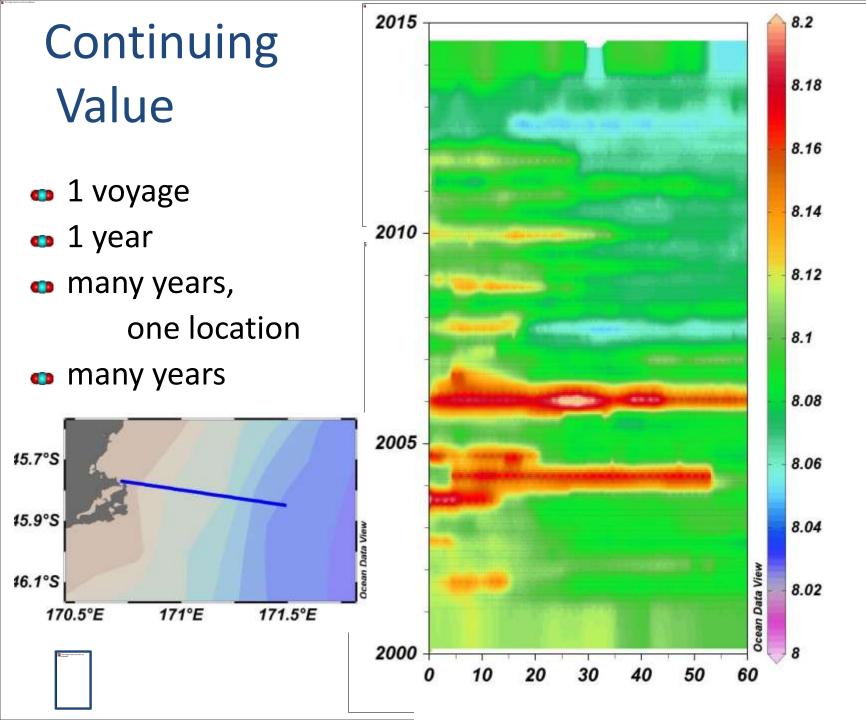

core measurements:

- temperature
- 💿 salinity
- opco<sub>2</sub>
- 💿 рН

- alkalinity
- C<sub>T</sub>
- nutrients
- o chlorophyll a

## Added Value

- Core measurements, plus add-ons to make the most use of boat time –
  - directly related to carbon time series
  - seaweed, birds, trace metals, bacteria, enzymes, nitrogen cycling, science communication ...
- Students, either directly involved in add-on projects, or general oceanographic experience
- Training platform for international students

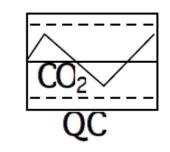

## **Capability and Resources**

- Started simple, added capacity as we have grown
- Kept core measurements, same personnel
- International collaboration where possible
- Inter-calibrations, certified reference materials
- Quality, Quality, Quality
- International databases
- Will be up-graded to comply with GOA-ON Goal 1 requirements

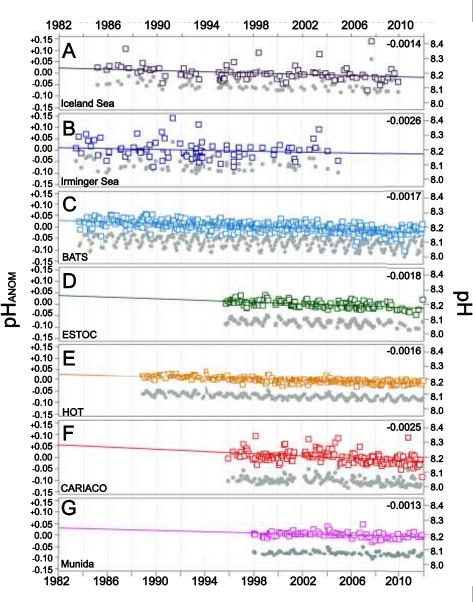

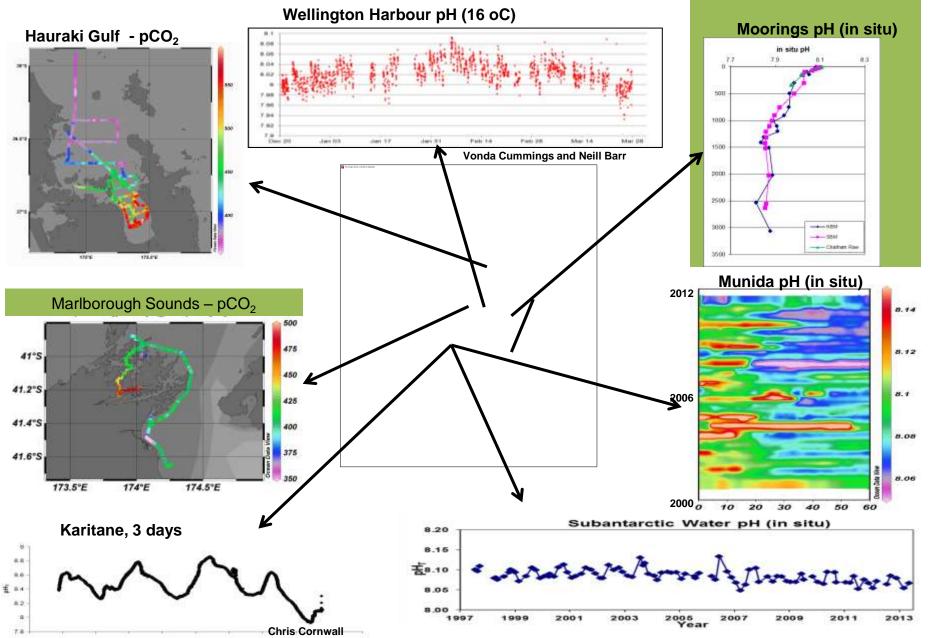

## Results

- Area is a sink for atmospheric carbon dioxide
- Biological activity is main driver of seasonal variability
- Long term pH decrease in subantarctic water is similar to that observed at other long-term monitoring sites

Bates, N.R et al.., 2014. Changing ocean chemistry: A time-series view of ocean uptake of anthropogenic  $CO_2$  and ocean acidification. Oceanography 27 (1), 126-141.

## OA data available in NZ region

## Need for more OA data

- Clear that waters around NZ are variable
  - spatially, different time scales
- OA important for aquaculture, culturally, also scientific interest
- International effort to set up observing network GOA-ON
- Need a bigger picture of NZ base-line conditions
- Need to get an understanding of the variability
- Identify areas of vulnerability and potential resilience
- Inform coastal management plans

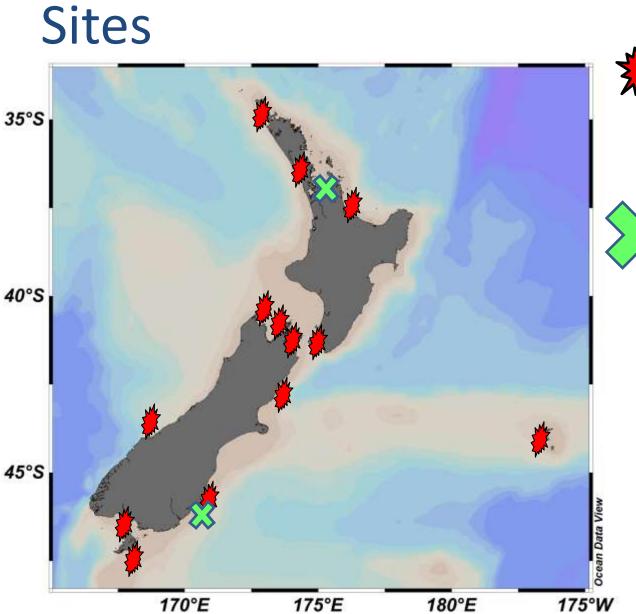

### NZOA-ON:

New Zealand Ocean Acidification Observing Network

- Establish a network for coastal OA observations
- Fortnightly bottle sampling + moored pH sensor
- alkalinity and DIC measurements  $\rightarrow$  pH,  $\Omega$ , [CO<sub>3</sub><sup>2-</sup>]....
- Central analytical facility NIWA/University of Otago Research Centre for Oceanography
- Sampling Sites 14
  - Utilise existing monitoring sites (regional councils, marine labs, port authorities, DOC, research platforms...)
  - Pristine / high impact / aquaculture sites
  - Target particular ecosystems, species...

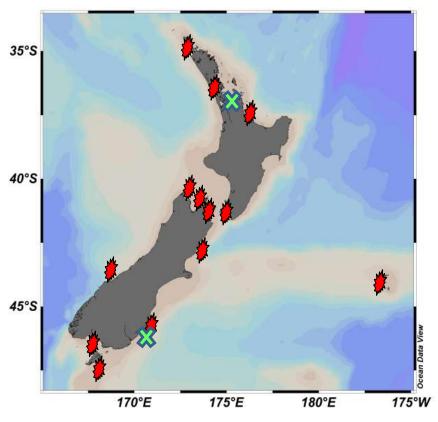

bottle sampling

GOA-ON FoT mooring Munida time series

### Sites

## Partners

#### **Aquaculture / Fishing Industry**

Mussel spat, farms Fishing industry Aquaculture NZ Paua Industry Council

#### Councils

Waikato Regional Council Environment Southland Auckland Council Bay of Plenty Regional Council

#### **Government Departments**

Ministry for Primary Industries

#### **Research Institutes**

NIWA University of Otago Cawthron Institute University of Auckland

#### **Coastal Marine Guardians?** Iwi ?

## NZOA-ON

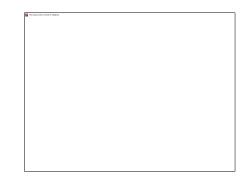

- Fourteen sites
- Fortnightly bottle sampling
- Duplicates every four sampling events
- Return bottles to lab when case is full
- Training for samplers (video)
- Issues
  - use of mercuric chloride preservative (HASNO)

|                                       |   |
|                                       |   |
|                                       |   |
|                                       |   |
|                                       |   |

- op pH sensors (SeaFET™)
  - to establish short term variability (diel, tidal)
  - deploy on short-term basis (4-5 months)
  - move around sites

| The mapped particle burned by Contract. |  |

|   |  |
|   |  |
|   |  |
|   |  |
|   |  |
|   |  |
|   |  |

- Network is easily reproduced, expanded
- Two sites upgraded to GOA-ON standard
- Data will be available via website

## NIWA/University of Otago Research Centre for Oceanography, Dunedin

- central analytical facility
- experience in carbonate chemistry analysis, calculations and interpretation
- international inter-comparisons, demonstrated high quality
- dedicated marine chemistry technician (2-years)
- commercial analytical service
  - additional samples (industry, councils...)
  - preparation and certification of buffers and dyes
- logistics bottles, freight boxes
- database management

| The maps served currently for deployment |  |

## Medium-Long Term Goals What will we do with the data?

- Knowledge of present-day conditions, against which to assess future impacts
- Knowledge of spatial and temporal variability in NZ coastal waters
- Identification of vulnerable sites
- Data for aquaculture industry, policy making, coastal management
- Modelling input to NZ coastal biogeochemical model
- Secure funding to consolidate NZOA-ON

## NZOA-ON: Summary

- Building on existing expertise
- Munida time series
- Working with partners
  - aquaculture / fishing industry
  - central and local government
  - research institutes
  - coastal management groups, iwi
- o 14 Sites
- Fortnightly bottle sampling + roving pH sensors
- Central analytical facility
- High quality
- 2 GOA-ON sites

## Fa'afetai

#### Thanks to:

- NZ Prime Ministers Science Prize
  funding for Marine Technician
- NIWA Capex for infra-structure
- Many industry, council and institutional partners
- Ministry for Primary Industries
- IOCCP for funding to attend the GOA-ON meetings (Seattle, St Andrews)

- Anna Crosbie
- o Norman Ragg
- Judith Murdoch
- John Zeldis
- Mary Livingston
- Colin Johnston
- Mike Hudson
- Hilke Giles
- Jeremy Cooper
- Julie Hills
- Steve Urlich
- Ted Culley
- Todd Capson
